Climate Finance and Carbon Markets

In order to mount a successful financial response to climate change, capital flows need to be shifted, scaled up, optimised and backed by consistent policy.

By 2020, $5.7 tn investment in green infrastructure will be needed annually to reach a 2°C warming scenario.

Current investment sits at $560 bn annually - 20% from public funds, 80% from private.

$700 bn is needed just to ensure that the shift from business-as-usual investment is a stable possibility.

$700 bn

$5.7 trillion

$360 billion

$700 billion

$674 billion

$674 bn was invested in fossil fuel exploration in 2013 despite 60% of current reserves being unburnable, according to Carbon Tracker.

Current investment sits at $360 bn annually - 26% from public funds, 74% from private.

The Challenge...

Financing Climate Action

$1 bn was raised by the Californian carbon market for investment in emission reduction projects.

$500,000 stoves

$1 billion

10% of stock markets now offer at least one sustainability index according to the Sustainable Stockmarket Exchanges Initiative.

83 insurance organisations have committed to the principles of the UNEP FI Principles for Sustainable Insurance.
